

Military STORAGE SOLUTIONS

Military installations are not only responsible for storing and organizing a large amount of valuable gear, equipment and weapons but must also ensure that their supplies can be transported quickly and securely. Effective storage solutions not only help improve operational readiness, but also improve morale by simplifying inventory counts and ensuring gear accountability.

With over 40 years of experience working with military units and DOD procurement processes, we're here to make storage simple and straightforward so you can focus on training and preparing.

Configurable Weapon Storage

We offer a variety of weapons storage solutions to ensure that any weapon, from pistols to long guns, can be kept accessible, secure, and at the ready. Configurable weapons racks allow most optics and accessories to remain fully assembled while in storage while also allowing for easy reconfiguration as technology evolves.

Warehouse and CIF Storage

Make the most of limited storage space and keep supplies organized using high density mobile storage. By placing pallet racking on carriages that slide along floor rails, you can more efficiently store and retrieve OCIE, field supplies, MREs, uniforms, and more while allowing for easier visual inventory. Optional locking and aisle access controls allow additional security and access reporting as needed.

Deployable Solutions

When it's time for deployment or a field rotation, don't waste time repacking every item for shipping, only to unpack it for layouts and customs, then unpack again when you arrive at your final location. Our deployable weapon racks and TRICONS, designed with input from the US military, allow you to store items in the same container in which you deploy them.

TA-50 and Gear Lockers

Maintain accountability and uphold storage standards for items like rucks, PT equipment, and gear with perforated lockers that keep gear secure and allow for visual inventory.

Partnering with you every step of the way

Military building and procurement projects have many moving parts. We're here to help streamline the process with:

- Free onsite space assessments
- Local full service from design, specification, installation, and service to maintenance and relocation
- An experienced CAD department fully trained on the Revit Software
- Insurance and bonding to handle large projects
- Coordination with architects, designers, and other trades
- GSA, Sourcewell, Omnia, Equalis, and Prime Vendor purchase contracts available

Service you can trust

- GREENGUARD Certified products
- Factory certified trained installers and service technicians
