

Thank you for the opportunity to present “Modular Solutions for Utility Casework”. AIA Accredited Presentation

The hour-long AIA accredited presentation will go through the advantages of using modular casework over traditional millwork. In today’s working environments it is important to understand the impact of having a product that can adapt to change as well as stand up over time especially in the “intensive use” areas. Modular casework offers these benefits and more when specified in the appropriate applications.

Participants will learn the following:

- Why considering **Durability** to be one of the most important factors in the design implementation and specification phase
- Understanding the importance of workflow and the benefits of an on-site evaluation and how it can be vital in helping people who use the product to be at their productive best
- The value of a factory produced product
- Application photos that discuss “intensive use” areas
- Demo pieces available to illustrate how pieces are manufactured and built to last

Areas that will be touched upon in this presentation include Healthcare, Corporate, Education, and GSA markets.

We look forward to presenting this to your design team. This AIA-CEU allows for 1 credit for participation.
