PHARMACY

**Smart
Resourceful
Reliable**

Real World Solutions

Hamilton Casework Solutions has been solving workflow issues through improved design and creative cabinetry for over five decades. When it came time to develop a line for pharmacy environments, HAMILTON applied these same principles. We consulted with pharmacy directors and design experts to create a system of casegoods that improves their everyday storage issues. Our pharmacy collection has continued to evolve over the years in response to advancing technologies and customer feedback.

Specialty Products

HAMILTON modular casework is a natural fit for the pharmacy environment. Our unique manufacturing processes reduce the disruption of installation. Our flexible components may be moved and repurposed in response to new equipment purchases.

We took this natural affinity one step further with pieces that support the workflow optimization, infection control and employee satisfaction goals inherent in every pharmacy. Our compound areas feature sinks with drying racks and pipes covered with removable panels to meet ADA regulations. Handy removable drawers have vinyl-wrapped construction that ease cleaning and remove openings where bacteria can grow. All exposed edges are sealed to eliminate wicking.

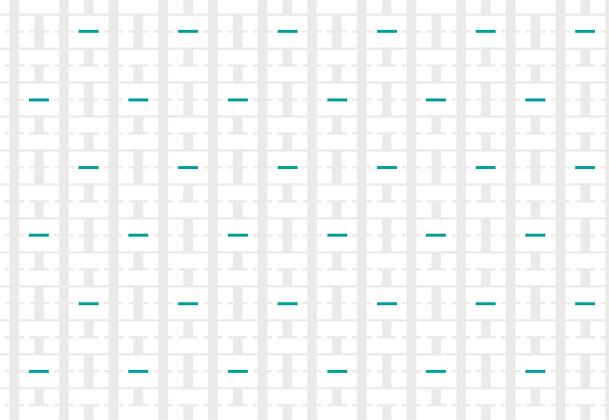

Tailored to Fit

Every pharmacy is unique. We hear that statement over and over from our clients. HAMILTON's wide selection of modular casework allows you to have a pharmacy system that fits your individual needs. In the hospital pharmacy ante room pictured above, epoxy floor coating has been installed over the face of the powder-coated steel bases making it easy to clean the floor and reduce crevices. Gravity feed drawers and adjustable shelves line both walls to put hundreds of medications and other materials at your fingertips. A two-way stainless steel storage unit is built into the wall. IV solutions and other supplies may be unpacked by technicians and loaded into this cabinet without entering the clean room and compromising the air with cardboard or microbial particles.

Big Picture

HAMILTON engineer and design consultants are experts in providing innovative solutions that meet federal regulations for pharmacy spaces. We offer base cabinets with retractable shelves to house printers and windows enclosed in casework to facilitate communication between departments. We offer mobile work islands that look built-in but have hidden wheels that may be moved to accommodate different work patterns or transport materials from one area to another.

Detail-Minded

We often speak to Pharmacy Directors after project completion. They tell us that it is HAMILTON's attention to details that makes their lives easier day in and day out.

- Integrated toe kicks allow pharmacists to stand close to the counter when at work.
- Easily adjusted shelves go from flat to horizontal with a touch of the hand.
- Soft-close drawers reduce noise pollution.
- Black phenolic resin work surfaces provide the ultimate in chemical resistance and durability while making it easy to locate stray white pills.

HAMILTON attends to the big picture as well as the details to deliver the perfect fit, every time.

HAMILTON Solutions at Work

At Capital Health Medical Center Hopewell, two walls of storage shield the order entry area from the noise and heat of nearby carousels and refrigerators. Staff pharmacists work at their desk computers and make phone calls in comfort while retaining easy access to medications.

Hamilton Casework Solutions offer GREENGUARD Gold certified products to provide safe, quality, environmentally friendly workspaces. FSC® (FSC-C110583) and OSHPD certified components are also available as specified by a designer.
