

A **GLOBAL** Consulting Company Receives a **STORAGE** Consultation of Their Own

Spacesaver Interiors has a long history of providing excellent customer service, and this especially holds true for their work with this Global Consulting Company.

A TRUSTED AND LASTING PARTNERSHIP

A relation from a previous project let Spacesaver Interiors know that this Global Consulting Company was due to relocate soon and would need a new, dedicated storage space for their physical resources and reference library. After reaching out to the consulting company, Spacesaver Interiors was brought onto the job as storage professionals.

After receiving the plans from the architectural firm, Spacesaver drafted up one option - leveraging high-density mobile shelving to maximize total storage capacity in the given square footage. The first on site project review, a mistake had been discovered: the architectural firm had sent over the blueprint for the wrong room!

LEVERAGE High-Density Mobile Shelving to **MAXIMIZE** Storage Capacity

Luckily, the mistake was caught before anything had gone into production. As a result of this discovery, a new draft of storage plans had to be made in 20% less space! All parties involved were able to communicate forthwrite and were able to solve the situation with practically no delays in installation.

SEAMLESS INSTALLATION

Moving forward without a hitch, Spacesaver Interiors installed a storage system that was completely future proofed. The powered mobile shelving system met all safety protocols and linked with the smart building interface for fire and security details.

The touchscreen interface of the powered mobile system allowed for access control and auditing as well as touchless access to the aisles. Beyond safety, the smart building connection ensured that the collection was being properly ventilated. The shelving system is able to automatically open and close shelves to rid the space of moisture.

A TRUSTED AND LASTING PARTNERSHIP

Additional elements included daylight lighting, programmed to turn on when an aisle opens, and nantucket drawers for small item storage. Nantucket drawers are designed to work seamlessly with all other accessories while being fully configurable. The face panels, or end-caps were made of a high pressure laminate finish in an imitation light-oak to match the overall design of the space.

All in all, Spacesaver Interiors' customer service ensured that this project was completed on time and that any problems encountered were dealt with quickly and professionally, with the client's happiness always in mind.
