

STORAGE

PROTECT. PRESERVE.

COLLECTIONS

COLLECTIONS ALREADY HAVE A PLACE IN HISTORY. OUR STORAGE SOLUTIONS ENSURE THEY'LL HAVE ONE IN THE FUTURE.

Collection care. Arguably the single-most important undertaking for museums both large and small. As collections continue to grow, efficient storage space and optimum convenience and control have become primary needs in today's preservation strategies. At Spacesaver, we fully recognize that the most significant factors influencing your choice in storage systems are conservation, preservation, and security. To ensure these qualities, we acquired Viking Metal Cabinet Company to offer you a single source for all your storage needs. With our combined industry knowledge and expansive product offering, you won't find a more effective provider of collection-care systems.

SECURITY

PRESERVING

“By reducing storage space by fifty percent and enhancing collection safety, mobile storage was an obvious solution.”

— John Rutchick,
Director of Facilities Management

The Museum of America and the Sea Mystic, CT*

THE SPACESAVER INTERIOR ADVANTAGE

CONVENTIONAL LAYOUT

SPACE SAVED

SPACE MAXIMIZED

By mounting storage units on wheeled carriages that run on tracks, Spacesaver Interiors systems eliminate the need for space-wasting fixed aisles. You simply push a button on our powered systems or turn the handle on our manual ones to open an aisle where you want it. The result is 100% greater storage capacity or 50% space reduction.

HELPING PRESERVE ONE OF THE WORLD’S MOST PRECIOUS GEMS: FLOOR SPACE.

Sooner or later, institutions large and small experience a lack of storage space. Adding on to existing structures, expanding to other nonworking areas, or even leasing off-site storage are all viable options; however, each presents its own set of drawbacks and challenges. That is why we developed space conservation, Spacesaver Interiors’s innovative approach to solving storage needs.

As the innovator of high-density mobile storage systems for museums, repositories, depositories, archives, and research collections, we’re helping to utilize millions of square feet of available floor space. Spacesaver Interiors mobile storage systems allow clients to take advantage of nonproductive, fixed-aisle space used in traditional stationary-storage applications.

SPACE

COLLECTION

“I didn’t ever think Spacesaver Interiors systems provided space for two million objects, but they did.”

— Bill Sisson, Chief of Curatorial Division
State Museum of Pennsylvania Harrisburg, PA

SYSTEMS SO ADAPTABLE, THEY CAN EVEN PROTECT YOUR REPUTATION.

Spacesaver Interiors’s line of high-density mobile storage systems offers the design features and flexibility required to safely secure your collections and make room for future expansion. We have a proven history in helping museums preserve their individual collections and, equally important, their good standing in the community.

The inherent flexibility of our systems allows for customdesigned units to be built to specific requirements. The overall dimensions and layout of each system will depend on a variety of factors: the size, shape, and weight of the objects being stored; access and retrieval frequency; type of housing configured into the mobile storage system; existing architectural constraints; and security concerns. However simple or complex your needs, the Spacesaver Interiors team of museum specialists can provide a free, in-depth, space and storage analysis to account for every item.

Rest assured, we’ll help turn this otherwise long and complex process into a manageable and successful one.

STORAGE HOUSING DESIGN OPTIONS

The nature of the stored material in your collection will determine the storage housing used and the final configuration of the overall system design. Each component offers its own form of protection to help guard against environmental factors (including human contact) that can lead to eventual deterioration or irreparable damage to your collections. Not to worry, though, Spacesaver Interiors/Viking state-of-the-art systems are scientifically designed and engineered to provide maximum conservation and security.

“They were there, totally involved in the entire process. Everything was taken care of and it went seamlessly.”

— Nancy Kirkpatrick, Director of Museum Services
Asian Art Museum San Francisco, CA

Lateral Sliding Racks

Shelving for Any Collection

Herbarium Storage

Our five primary storage units are interchangeable within the structure and can be customized to meet your unique needs. Those units include: Wire Shelving, 4-Post Shelving, Cantilever Shelving, Specimen Drawers and Storage Cabinets. You can choose and configure between these options within the same housing unit to best accommodate the collection material, specimen or being stored. System carriages can be made to your desired width and length.

PRESERVATION

SECURITY, PRESERVATION & CONSERVATION OF COLLECTIONS.

The conservation of museum collections is predicated upon the successful execution of preservation tactics. One of the single greatest decisions made by a conservator or curator is the selection of a storage system designed to protect items from human and environmental sources. Inherent in the design features of Spacesaver Interiors's turnkey storage technology is the assurance of preservation and maximum accessibility. From our exclusive field-tested safety features to our unique storage design attributes intended to preserve even the most valuable objects, Spacesaver Interiors addresses each preservation issue with solutions developed exclusively for museums and archives.

TACTICS

A gallery wall featuring various framed artworks, including abstract and figurative pieces, with a perforated metal railing in the foreground. The word "TACTICS" is overlaid in large white letters on the left side of the image. The background wall is white with a perforated metal railing in the foreground. The artworks are displayed in a grid-like fashion, with some pieces in gold frames and others in dark frames. The overall aesthetic is modern and minimalist.
